1900	940	IR2200-A
5000	4000	IR3200-A

\* Compared with the current IR1000/2000/3000

## Space saving

New structure without fixed throttle does not require a mist separator.

Digital pressure switch standardised

**IR1200-A/2200-A/3200-A Series**

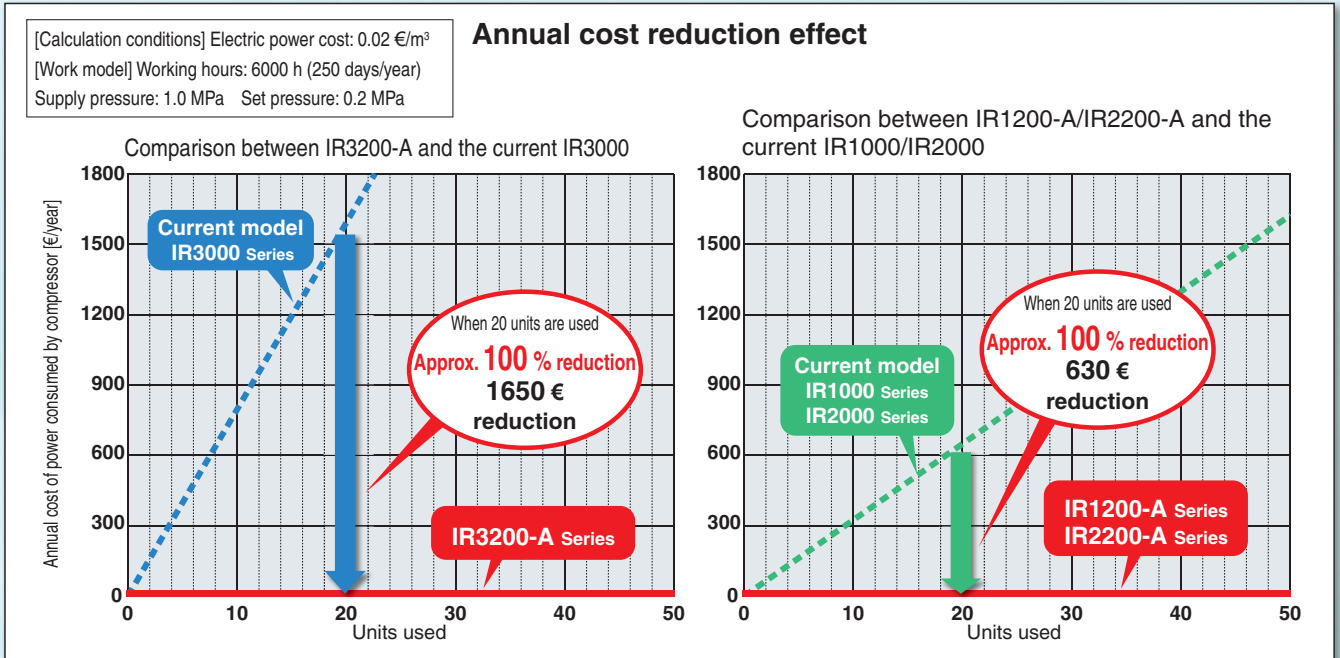

CAT.EUS60-24Aa-UK

# Reduction in air consumption

## ● Air consumption is reduced with a new original structure.

With this new original structure, running costs are reduced.

## ● No fixed throttle in the new design.

\* Poor quality of air may cause operation failure. Select a model for air quality that is suitable for the desired air cleanliness in catalogue on SMC website [www.smc.eu](http://www.smc.eu)

## ● Flow rate: Up to approx. twice

(Compared to the current SMC product) [l/min (ANR)]

IR	Current model	Series
720	320	IR1200-A
1900	940	IR2200-A
5000	4000	IR3200-A

Supply pressure: 0.7 MPa

Supply pressure: 0.7 MPa

**Weight**

**Reduced by up to approx. 27%** [kg]

0.13	0.14	IR1200-A
0.23	0.30	IR2200-A
0.47	0.64	IR3200-A

Digital pressure switch standardised

Pressure gauge

**Hexagon panel nut mounting**

\* Interchangeable with the current SMC product

**Repeatability: ±1%** (Full span)

**Mounting is interchangeable with the current SMC model.**

**New IR can be used between a cylinder and solenoid valve.**

(Refer to the Specific Product Precautions on page 18.)

Note) The set pressure may vary depending on the elapsed time and change in ambient temperature after pressure setting. If the setting value varies, adjust the pressure with the knob.

**Exhaust (EXH) directions can be selected.** (IR3200-A Series)

Bottom and front exhaust added.

## Application Examples

### Constant fluid pressure Note)

- As there is a large effective area for supply and exhaust pressure, setting can be done quickly.

### Balance and drive Note) Accurate balance pressure setting

- Limits pressure fluctuation when driving a cylinder, maintaining excellent static and dynamic balance.

### Contact pressure control Note)

- Adapts to the cylinder's piston displacement, maintaining a constant pressure.

### Multistage control of pressing force for workpiece Note) (Wrapping machine)

### Residual pressure relief Note)

Ex.) Backflow from the tank

- Residual pressure is exhausted by relief function.
- It can be used between a cylinder and a solenoid valve.

### Adjustment of blow-line pressure Note)

- Outlet pressure is less affected by fluctuation of inlet pressure. New IR offers consistent pressure control.

Note) The set pressure may vary depending on the elapsed time and change in ambient temperature after pressure setting. If the setting value varies, adjust the pressure with the knob.

**IR3210-A** Supply pressure: 0.3 to 1.0 MPa  
Set pressure: 0.2 MPa  
Flow rate: 20 l/min (ANR)

## Construction

### Basic type (Knob): IR22□0-A

### Working principle

When the knob is rotated, the flapper is pushed through the spring, and a gap is generated between the nozzle and flapper. The supply pressure flows to the inlet passes through the path between the nozzle and flapper and acts on the supply diaphragm as nozzle back pressure. The force generated by the diaphragm pushes down the valve, and the supply pressure flows to the outlet. The discharged air pressure acts on the exhaust diaphragm, and counteracts against the force generated by the supply diaphragm. The air pressure acts on the nozzle diaphragm at the same time, and counteracts against the compression force of the spring to adjust the set pressure. When the set pressure increases too much, the nozzle diaphragm is pushed up, and a gap is generated between the flapper and nozzle diaphragm after the flapper is closed. The balance of the supply diaphragm and exhaust diaphragm is lost when the nozzle back pressure flows into the atmosphere. The exhaust valve is open after the valve is closed, and excess pressure on the outlet is released to the air. Due to this pilot mechanism, pressure variations are detected and pressure adjustment is possible.

### Component Parts

No.	Description	Material		
		IR1200-A	IR2200-A	IR3200-A

## Made to Order

Please contact SMC for detailed dimensions, specifications, each part number and lead times.

### 1 Clean Series

10 — IR □ 2 □ 0 — □ □ □ — A

● Clean series

#### Specifications

Cleanliness	ISO Class 3
Bleed hole	With M5 fitting (Applicable tubing O.D. Ø 6)
EXH port	IR1200-A/2200-A series: With M5 fitting (Applicable tubing O.D. Ø 6) IR3200-A series: 1/2 female thread
Pressure gauge	Oil-free + Stud parts nickle plated
Grease	Fluorine grease

### 2 Non-grease Specifications

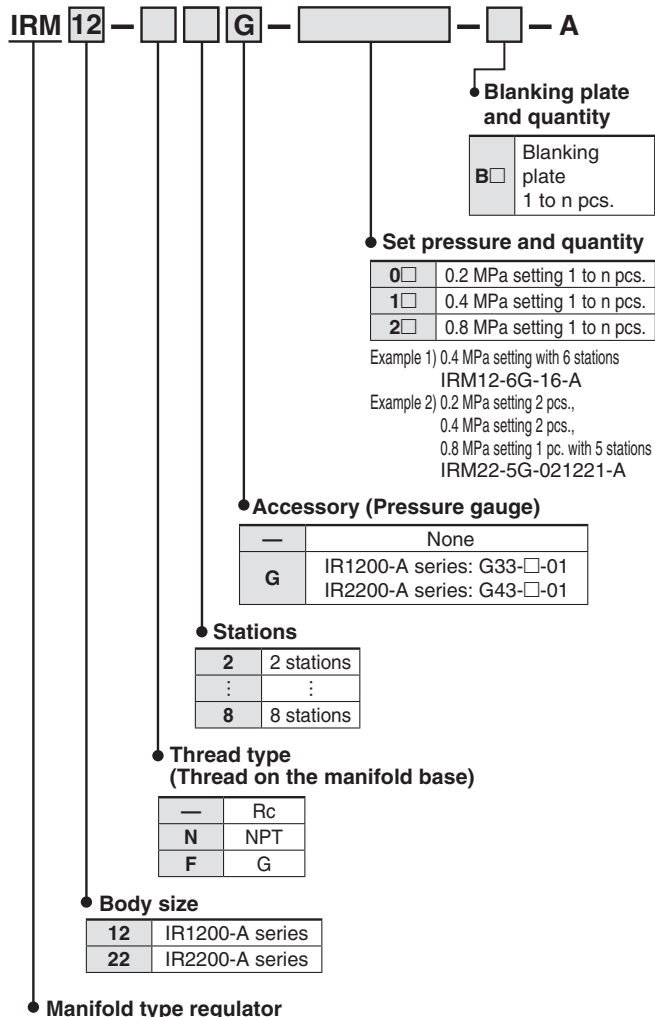

IR □ 2 □ 0 — □ □ □ — A — X1

● Non-grease specifications

- Note 1) Assembly is performed in a general assembly environment.  
 Note 2) Parts are not washed.  
 Note 3) Fluorine grease is used on some of the wetted parts (sliding parts) and non-wetted parts (threaded part on the setting knob).

### 3 Manifold Specifications (Except IR3200-A series)

2 to 8 station manifold type regulators.  
 (Please contact SMC regarding 9 or more stations.)

#### Specifications

Stations	2 to 8 stations	
Port	Common SUP	IR1200-A series: 1/4, IR2200-A series: 1/2
	Individual OUT	IR1200-A series: 1/8, IR2200-A series: 1/4
	Individual EXH (From IR body)	
Set pressure	0.2 MPa, 0.4 MPa and 0.8 MPa settings can be combined.	
Accessory (Pressure gauge)	G33-□-01 (IR1200-A series), G43-□-01 (IR2200-A series)	

- Note 1) Regulators to be manifolded are counted starting from stations 1 on the left side with the OUT ports in front.  
 Note 2) When regulators with a different set pressure are manifolded, viewing OUT ports from front, the low pressure range is installed on the left side and high pressure range is on the right side. In case of the Example 2) above mentioned, stations 1 and 2 are of 0.2 MPa setting, stations 3 and 4 are of 0.4 MPa setting, and station 5 is of 0.8 MPa setting.  
 Note 3) For the model with pressure gauge (G), the pressure gauge is shipped together, but not assembled.

# IR1200-A/2200-A/3200-A Series Specific Product Precautions 1

Be sure to read this before handling. Refer to the back cover for Safety Instructions. For F.R.L. Units Precautions, refer to "Handling Precautions for SMC Products" on SMC website, <http://www.smc.eu>

## Piping

### Warning

#### 1. Screw piping together with the recommended proper torque while holding the side with the female threads.

Looseness or faulty sealing will occur if tightening torque is insufficient, while thread damage will result if the torque is excessive.

Furthermore, if the side with the female threads is not held while tightening, excessive force will be applied directly to piping brackets, etc., causing damage or other problems.

#### Recommended Proper Torque [N·m]

Connection thread	1/8	1/4	3/8	1/2 (Note)
Torque	7 to 9	12 to 14	22 to 24	28 to 30

Note) Tightening force for connecting to the EXH port of IR32□<sub>2</sub>-A is 8 to 10 N·m.

#### 2. Do not allow twisting or bending moment to be applied other than the weight of the equipment.

Provide separate support for external piping, as damage may otherwise occur.

#### 3. Piping materials without flexibility such as steel tube piping are prone to be effected by excess moment load and vibration from the piping side. Use flexible tubing in between to avoid such an effect.

### Caution

#### 1. Preparation before piping

Before piping is connected, it should be thoroughly blown out with air (flushing) or washed to remove chips, cutting oil and other debris from inside the pipe.

## Piping

### Caution

#### 2. Wrapping of sealant tape

When screwing piping or fittings into ports, ensure that metal chips from the pipe threads or sealing material do not enter the piping. Also, when the sealant tape is used, leave 1.5 to 2 thread ridges exposed at the end of the threads.

## Operating Environment

### Warning

1. Do not use in an atmosphere having corrosive gases, chemicals, sea water, water, water steam, or where there is direct contact with any of these.
2. Do not operate in locations where vibration or impact occurs.
3. In locations which receive direct sunlight, provide a protective cover, etc.
4. In locations near heat sources, block off any radiated heat.
5. In locations where there is contact with spatter from water, oil or solder, etc., implement suitable protective measures.

## Air Supply

### Warning

1. Please consult with SMC when using the product in applications other than compressed air.
2. Do not use compressed air which includes chemicals, synthetic oils containing organic solvents, salt or corrosive gases, etc., as this can cause damage or malfunction.
3. If condensate in the drain bowl is not emptied on a regular basis, the bowl will overflow and allow the condensate to enter the outlet side. This will cause a malfunction of pneumatic equipment.

When removing drain is difficult, the use of a filter with an auto drain is recommended.

### Caution

1. Condensate or dust, etc. in the supply pressure line can cause malfunctions. In addition to an air filter (SMC Series AF, etc.), please use a mist separator (SMC Series AM, AFM) depending on the conditions. Refer to catalogue on SMC Website [www.smc.eu](http://www.smc.eu).
2. When a lubricator is used at the supply side of the product, it can cause malfunctions. Do not use a lubricator at the supply side of the product. If lubrication is required for terminal devices, connect a lubricator on the output side of the regulator.

# IR1200-A/2200-A/3200-A Series Specific Product Precautions 2

Be sure to read this before handling. Refer to the back cover for Safety Instructions. For F.R.L. Units Precautions, refer to “Handling Precautions for SMC Products” on SMC website, <http://www.smc.eu>

## Maintenance

### Warning

1. When the product is removed for maintenance, reduce the set pressure to “0” and shut off the supply pressure completely beforehand.
2. When a pressure gauge is to be mounted, remove the plug after reducing the set pressure to “0”.
3. When using the regulator between a solenoid valve and an actuator, check the pressure gauge periodically. Sudden pressure fluctuations may shorten the durability of the pressure gauge.  
A digital pressure gauge is recommended for such situation or as deemed necessary.

## Handling

### Caution

1. When the regulator with pressure gauge is used, do not apply impact to the product by dropping it, etc. during transportation or installation.  
This may cause misalignment of the pressure gauge pointer.

## Operation

### Caution

1. Do not use a regulator outside the range of its specifications as this can cause failure. (Refer to the specifications.)
2. When mounting is performed, make connections while confirming port indications.
3. When mounting the bracket or tightening the hexagon panel nut on the panel, tighten them to the recommended proper torque.  
Looseness or faulty sealing will occur if tightening torque is insufficient, while thread damage will result if the torque is excessive.  
**Recommended Proper Torque (N·m)**  
Set nut (for bracket)  

IR12□0-A	IR22□0-A	IR32□□-A
2.0±0.2		

  
Hexagon panel nut (for knob type only)  

IR12□0-A	IR22□0-A	IR32□□-A
3.5±0.5		
4. To set the pressure using the knob, turn the knob in the direction that increases pressure and be sure to tighten the lock nut after the pressure is adjusted. When tightening the nut, tighten so that the knob does not move due to friction caused by tightening.
5. If the pressure is set in the direction that decreases pressure, the pressure may drop from the original set pressure. Turning the knob clockwise increases the outlet pressure, and turning it counterclockwise reduces the pressure.
6. When pressure is applied to the inlet of a regulator, make sure that the output is connected to the circuit. Air blow occurs from the outlet and it depends on the operating conditions.

## Operation

### Caution

7. The set pressure may vary depending on the elapsed time and change in ambient temperature after pressure setting. If the setting value varies, adjust with the knob.
8. If the directional control valve (solenoid valve, mechanical valve, etc.) is mounted and ON-OFF is repeated for a long time, the set pressure may vary. If the setting value varies, adjust with the knob.
9. There may be pulsation or noise depending on the pressure conditions, piping conditions and ambient environment. In this case, it is possible to improve the problem by changing the pressure conditions and piping conditions.  
If the problem is not improved, contact your SMC sales representative.
10. The capacity of the output side is large, and when used for the purpose of a relief function, the exhaust sound will be loud when being relieved. Therefore, operate with a silencer (SMC AN series, etc.) mounted on the exhaust port (EXH port).  
When using the IR1200-A and 2200-A series, contact your SMC sales representative.
11. When installing a pressure gauge to the product, do not apply pressure more than the maximum display pressure. This will cause a malfunction.
12. When using a regulator between a solenoid valve and cylinder, caution should be taken regarding the following points.
  - The residual pressure of the cylinder will be exhausted from the regulator's exhaust port. (Depending on the conditions, partial backflow may occur.)
  - When holding pressure at the intermediate position of a closed center solenoid valve, due to reduced pilot pressure the pressure inside the cylinder will not be able to be held because the regulator will perform an exhaust operation. If it is necessary for the pressure inside the cylinder to be held, please consider using in combination with a separate shut-off valve.
  - When releasing pressure at the intermediate position of an exhaust center solenoid valve, depending on the conditions, vacuum pressure may remain inside the cylinder. If the introduction of atmospheric pressure is required, please consider using in combination with a separate atmospheric pressure introduction valve.
13. When using the IR3200-A series in balancing applications, abnormal noises may occur depending on the pressure and circuit conditions. In such cases, the noise will often cease if changes are made to the pressure or piping conditions or if a high noise reduction type silencer (such as SMC's ANA1 series, etc.) is installed.
14. The min. supply pressure is the min. required supply pressure for when there is no flow on the output side. If flow is to be used, or if the volume on the outlet side is large, supply pressure with sufficient margins in regards to the set pressure if responsiveness is required.
15. When a precision regulator is used in applications in which back pressure is frequently applied or when it is used in environments where vibration is present or pulsations are present in the set pressure, wear of the exhaust valve may be accelerated, resulting in increased premature exhaust leakage.

## Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of “Caution,” “Warning” or “Danger.” They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)<sup>1)</sup>, and other safety regulations.

-  **Caution:** **Caution** indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.
-  **Warning:** **Warning** indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.
-  **Danger:** **Danger** indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

- 1) ISO 4414: Pneumatic fluid power – General rules relating to systems.  
ISO 4413: Hydraulic fluid power – General rules relating to systems.  
IEC 60204-1: Safety of machinery – Electrical equipment of machines.  
(Part 1: General requirements)
- ISO 10218-1: Manipulating industrial robots - Safety.  
etc.

## Warning

### 1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.

Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalogue information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

### 2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

### 3. Do not service or attempt to remove product and machinery/equipment until safety is confirmed.

1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

### 4. Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.

1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
2. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalogue.
3. An application which could have negative effects on people, property, or animals requiring special safety analysis.
4. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.

## Caution

### 1. The product is provided for use in manufacturing industries.

The product herein described is basically provided for peaceful use in manufacturing industries. If considering using the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary. If anything is unclear, contact your nearest sales branch.

## Limited warranty and Disclaimer/Compliance Requirements

The product used is subject to the following “Limited warranty and Disclaimer” and “Compliance Requirements”. Read and accept them before using the product.

### Limited warranty and Disclaimer

1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first.<sup>2)</sup> Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.
  2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided. This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
  3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalogue for the particular products.
- 2) Vacuum pads are excluded from this 1 year warranty.  
A vacuum pad is a consumable part, so it is warranted for a year after it is delivered. Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

### Compliance Requirements

1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

## Caution

### SMC products are not intended for use as instruments for legal metrology.

Measurement instruments that SMC manufactures or sells have not been qualified by type approval tests relevant to the metrology (measurement) laws of each country. Therefore, SMC products cannot be used for business or certification ordained by the metrology (measurement) laws of each country.

## Safety Instructions

Be sure to read “Handling Precautions for SMC Products” (M-E03-3) before using.
